Kent

University of **Kent**

Project Overview

- Encourage Kent PhD and early career researchers (ECRs) to sign-up for ORCID:
 - Very mobile so a persistent identifier particularly useful
 - Include in their PhD thesis and in all publications from the beginning of their career
- To employ PhD students/ECRs to act as ORCID champions in academic schools:
 - Increase ORCID sign-up by University of Kent staff and PG students (from 92 currently to a target of 1000)
- Integrate ORCID into our Kent systems:
 - Institutional repository, Kent Academic Repository (KAR)
 - New CONVERIS Current Research Information System (CRIS) – KRIMSON
 - Submission process for electronic research theses

Project Overview

- Investigate the potential of ORCID to aid effective reporting internally and externally (funders, HEFCE etc)
- Share widely our experiences with regard to our proposed advocacy approach and also our use of ORCID in our CRIS and eprints IR.
- An Information Services and Research Services project building on our successful collaboration with regard to implementation of the University of Kent Open Access Policy.

Three Main Challenges

- Developing a successful advocacy campaign
 - Clear benefits/advantages of ORCID for the researcher
- Effective integration of ORCID into University of Kent systems
- Effective integration of ORCID into University of Kent internal processes and use in internal/external reporting

Use cases and plans

- Need for unique author ID
- Lightweight model
- Technical development almost complete
- Focus on roll-out and resolving remaining 'soft' factors of implementation
- Promotion & publicity
- Collaboration with OUP

Systems involved

- Institutional personal profile
- CUD (Core User Directory)
- Symplectic
- Institutional repository

Three main challenges

1. Authoritative institutional identity management control
2. Synchronisation with Symplectic
3. Author value proposition

Embedding ORCID in researcher career paths

- Use cases
 - #1 ‘Moving ORCID upstream’
 - #2 ‘Enhancing registration in campus based publishing partnerships’

- Plans
 - Establishing a (very) cross-University project group and institutional ownership. Everything else will follow.

- Systems
 - EPrints, OJS, SITS and eVision, SAP, Agresso, Minerva

- Three challenges
 - Researcher buy-in and engagement (attention deficit)
 - Agreeing local data authority (quality / sources / flows)
 - Establishing the value proposition of a standard

ORCID Integration

Alexander Roberts
ISS Web Team MAnager

Currently

- Staff (Professional and Academic) use internal Research Information System (RIS)
- RIS pulls information in from CrossRef
- RIS pushes information to staff web pages and Institutional Repository (Cronfa - VuFind)
- RIS provides Research Management Data to Senior Management Team
- Lots of 'David Williams' – need to disambiguate

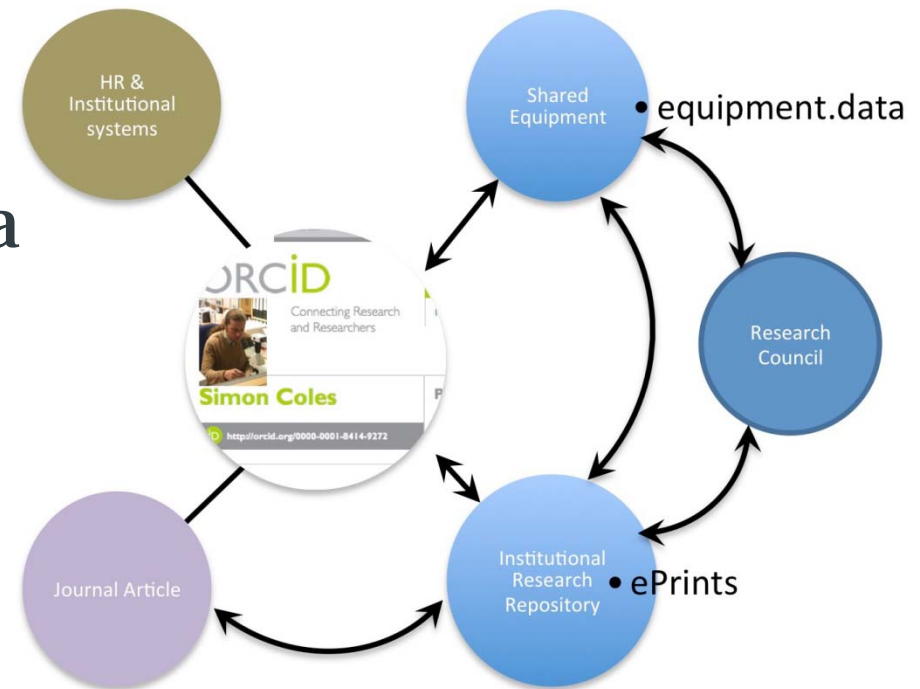

Next Steps...

- Bulk ORCID and ISNI registration on behalf of staff
- Integrate ORCID and ISNI with RIS and Cronfa Repository and Personal Web Pages
- Sharing experiences with Welsh Repository Network
- Working with staff to raise awareness and engagement

- **Use Case**
identity- outputs - equipment
- **Systems**
ePrints - equipment.data
- Gateway to Research
- **Challenges**
 - Legal issues
 - Academic buy-in
 - Technical integration

JISC-ARMA ORCID Pilot: University of York

Janette Colclough and Thom Blake
Research Support Team, Information Directorate

8th May 2014

LIBRARY

ARCHIVES

IT

- **Project team**

- Joint project: University Information Directorate and Research & Enterprise

- **Key features**

- Emphasis on researcher registration supported by an advocacy programme
- Implementation of a University Publications Policy requiring the use of an ORCID iD in preparing publication
- Integration within the University CRIS, Pure
- Use of Pure to populate the White Rose Research Online shared institutional repository

- **Challenges**

- Security requirement: Safe Harbor
- Researcher engagement: ORCID and Publications policy
- Technical issues: Pure and WRRO
- Disambiguation: Pure and WRRO
